

High voltage bipolar latch Hall chip

1. Product Introduction

HK402F is a high-voltage bipolar Hall switch chip manufactured using a high-voltage bipolar process. The chip is composed of voltage stabilizing unit, Hall voltage generator, differential amplifier circuit, temperature compensation circuit and Open collector output circuit. Working mode: input Magnetic flux density and output digital voltage signal. The chip has the ability to withstand high voltage surges and has strong noise resistance; Suitable for various fields such as electronic consumption, automotive, and industrial control. Provide TO92S inline packaging, SMT SOT23-3L packaging, and all packaging meets RoHS standards.

2. Function

- Open collector output
- ESD: $\pm 4\text{kV}$
- Operating voltage: $3.0\text{V} \sim 60\text{V}$
- Overvoltage protection capability: 80V
- Maximum driving current : 30mA
- Output built-in $10\text{k }\Omega$ Pull-up resistor
- Operating temperature range: $-40^\circ\text{C} \sim 150^\circ\text{C}$
- Power pin reverse voltage protection

3. Application

- Brushless DC motor commutation
- Speed measurement
- Count
- Corner position detection
- Proximity detection
- Suitable for automobiles and extreme industrial environments

4. Product packaging

Part No.	Packages	Temperature range	Packing
HK402FUA	TO92S	$-40^\circ\text{C} \sim 150^\circ\text{C}$	1000/bag
HK402FSU	SOT23-3L	$-40^\circ\text{C} \sim 150^\circ\text{C}$	3000/ reel

8. Limit parameter

Parameters	Symbols	Min	Max	Units
Power supply voltage	V_{CC}	-60	80	V
Output voltage	V_{OUT}	-0.5	80	V
Output current	I_{OUT}	0	40	mA
Operating temperature	T_J	-40	150	°C
storage temperature	T_{STG}	-50	165	°C

The absolute maximum rating is the limit value that a chip can withstand, and exceeding this value may cause permanent damage to the chip.

9. Electromagnetic characteristics

Test conditions: $T_J = -40^\circ\text{C} \sim 150^\circ\text{C}$, $V_{CC} = 3.0\text{V} \sim 60\text{V}$; Typical value test conditions: $T_J = 25^\circ\text{C}$, $V_{CC} = 5\text{V}$.

Parameters	Symbols	Test conditions	Min	Typ	Max	Units
Electrical performance						
Power supply voltage	V_{CC}		3.0		60	V
Power supply current	I_{CC}			4.8	8	mA
Output leakage current	I_{OLEAK}				10	uA
Output voltage	V_{SAT}	$I_{OUT} = 20\text{mA}$			0.4	V
Output current	I_{OUT}				30	mA
Output Rise Time	T_R	$C_L = 20\text{pF}$			1.0	us
Output Fall Time	T_F	$C_L = 20\text{pF}$			1.5	us

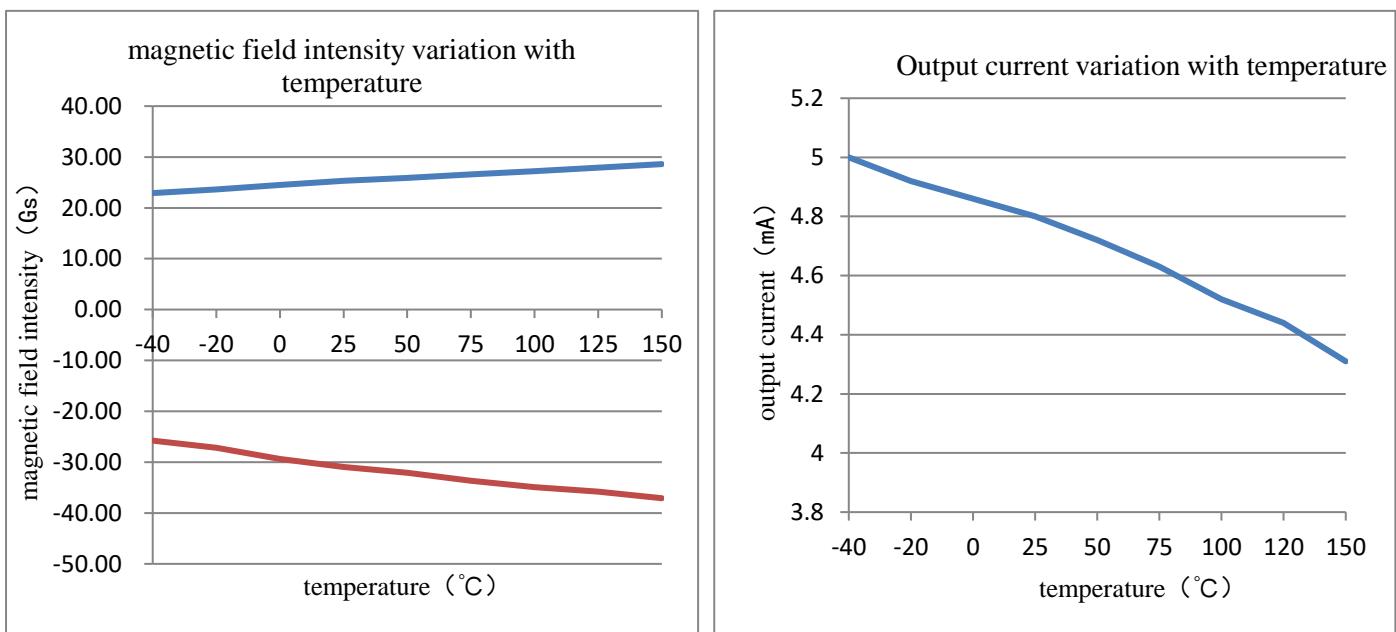

High voltage bipolar latch Hall chip

Magnetic performance						
operating point	B _{op}	C _L =20pF	10	25	40	Gs
release point	B _{rp}	C _L =20pF	-40	-25	-10	Gs
return difference	B _{HYS}	B _{op} -B _{rp}		50		Gs

10.Temperature Performance

V_{CC}=5V, B_{op} and B_{rp} Characteristic Performance

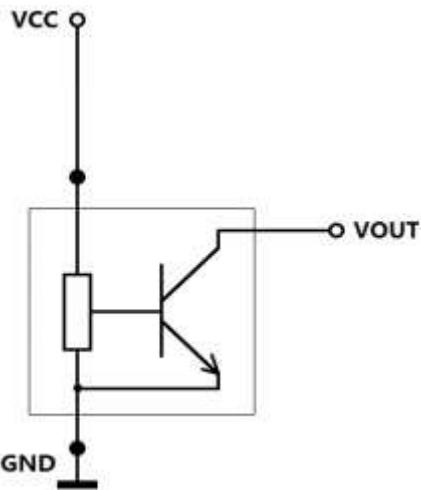

V_{CC}=5V, operating current Characteristic Performance

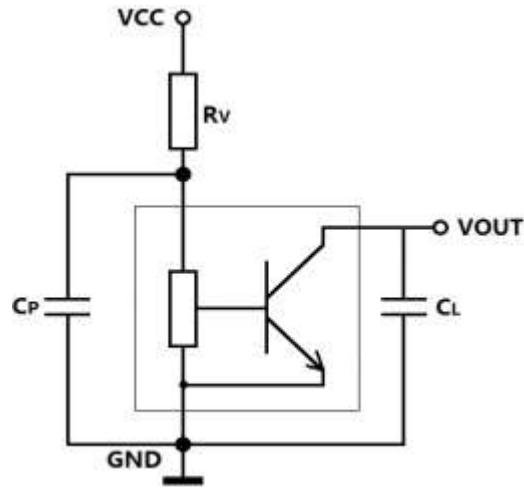

11.Application Circuit

The typical application circuit is shown in the following figure: Application Circuit 1, which can be applied to most circuits. Application circuit 2, where R_V=100 Ω, C_P=4.7nF, C_L=1nF, is suitable for circuits with interference or radiation interference on power supply lines. It is recommended to connect the resistor R_V and two capacitors C_P and C_L in series in the circuit, and place the resistor and capacitor components as close to the chip as possible.

13.Historic version

Versions	Update date	modify
REV1.0	2020.07	
REV1.1	2022.07	Optimize the minimum working voltage to 3.0V and increase the temperature characteristic curve
REV1.2	2023.04	Layout and formatting

14.Notes

- Hall chips are sensitive devices, and electrostatic protection measures should be taken during use, installation, and storage.
- During installation and use, mechanical stress applied to the device casing and leads should be minimized as much as possible.
- It is recommended that the welding temperature should not exceed 350 °C and the duration should not exceed 5 seconds.
- To ensure the safety and stability of Hall chips, it is not recommended to use them beyond the parameter range for a long time.
